- The Contemporary Surgical Approach to Rectal Prolapse. (*L. Lenisa*)
- Discussion
- Closure of the event

RATIONALE

The focus will be on the evolving technology improving the standard practice of Colorectal Surgery.

Robotic Surgery is gaining trust and popularity among surgeons, being the high costs of the procedure the main obstacle to a wide diffusion of the technique. Advantages of robotic surgery as well as latest achievements will be discussed.

Stapled trans-anal surgery of rectal prolapse, a standard of care in Italy, is gaining popularity worldwide, as continuous development and new devices are brought into the market. The multiple options to stapled trans-anal prolapse resections as well as the latest evidence from literature will be presented and discussed.
